### ABSTRACT

*Students are the precious resources but without the commitment from the faculty members, nothing can be done. The academic programs in India are not consonance with the educational system of the western countries so the need of the hour is our curriculum must be reframed to suit the needs of the generation. This paper talks about the current education system of India and a need to change it.*

**Keywords**— Indian present Education system, Shortfalls, Students inattention, Suggestion to improve by policymakers

### 1. EDUCATION IS THE MANIFESTATION OF PERFECTION WHICH IS ALREADY IN MAN

Education is the most potent instrument of creation, assimilation and transmission of knowledge, assumes a central role in the process of creating the leaders of the nation. Students are the precious resources but without the commitment from the faculty members, nothing can be done. To provide a focus, the seven principles are of great use.

- Encouraging contact between students and faculty.
- Developing cooperation among students.
- Encouraging active learning.
- Giving prompt feedback.
- Emphasizing time on task.
- Communicating high Expectation.
- Respecting diverse talents and ways of learning.

The question, we need an instant answer is whether the present education system facilitates the younger generation to come up in life. The answer is black and white each and everyone knows, NO. Then for what the generation is hurry to learn, to get a degree only. They are attending classes for getting attendance. The reason is only when they get the attendance stipulated by the college/university; they will be allowed to appear for the examination. Most of the students are not concerned with the classes but attendance.

Every coin has two sides; in the same way, let us go for the other side of the coin. How to make them deeply involved in the study? How to make them practically involved in the core subjects? Practical involvement moulds them well and makes them learn more. It is the duty of every master to find a solution to what discourages the present generation from caring the classes.

By supporting this, we can see the expression and feelings of our former president Dr. A. P. J. Abdul Kalam. Our students should be given quality and practical education to increase their knowledge and to compete with the people of other countries of the world. He added the percentage of people going to high school education is very low. So the percentage of youth going for high school education should be increased. More than 2 lakh students are going abroad to pursue their studies, Why this Migration?. Don't we have quality faculty, quality teaching etc? This is the time to think of quality and practical teaching.

### 2. CASE STUDY METHOD OF LEARNING

One of the solutions to these problems is a "case study" method of teaching. Case study method makes the students deeply involved in the subject. What is the case study? This method is different from other methods of teaching and it needs the students to take an active role than a passive role. The case method places the students in a simulated business environment and substitutes the student in the place of the business manager as the person required to make a set of divisions. Studying under the case method will result in the development of skills in critical thinking.

### 3. NATIONAL INCOME AND EDUCATION

We are not bothered about our education system. It is clear from the instance noted here. In the national budget, we set aside nearly 30 per cent of the national income for the defense including giving protection to VIPs, VVIPs etc. But it is a pity to note that we are spending an ignorable percentage for education i.e. only around 3 per cent of our national income. How can we uplift our education system by spending so meagre amount? The present education system is more or less a bridle to the students.

### 4. HIGH SCHOOL EDUCATION-INDIA AND THE WORLD

Besides, the president said India has a large number of youths compared to other countries. Well-nigh 10.7 crores of youths are going for High school Education to the world. The percentage of students enrol high school education in India is lower than the other countries. It is noted in table 1.

**Table 1: High school Education (World)**

S no.	Countries	Percentage
1.	South Africa	94
2.	America	93
3.	Mexico	83
4.	Russia	83
5.	INDIA	53

Does the table clearly show where we are? Despite various measures have been taken by both state and central Govt. every year we could not why? Another important and notable drawback of the curriculum is, out of the 200 top-ranked universities in the world, none of the Indian university is in the list. But we are posing as one of the developing countries and in 2020 we would be on the top.

### 5. GUIDELINES TO REACH THE STUDENTS

It is the duty of all faculty members to lead the generation from the dark to the light. How the following guidelines may give the solution:

- The masters must physically and mentally involve in the subject. The first thing is, they must be thorough with the subject which they are handling.
- Another problem lies in how to make the students interestingly attend the classes. As the moulders of the leaders of the state, the teachers must inculcate and feed them not only the syllabi but also, what is going on in and around the world. Then only, they will not be fed up with the classes and syllabi.
- Our curriculum is not based on any prescribed principle. The students may read and mug up the books and vomit in the examination. The practical application of the same is in question. Their subjects and jobs are far from match i.e. the relation between horse and horns. The academic programs in India are not consonance with the educational system of the western countries so the need of the hour is our curriculum must be reframed to suit the needs of the generation. The practical applicability of the same is inevitable. As far as possible, our curriculum must cater to the needs of society and must invoke enthusiasm among the students.
- Nowadays, education in every nook and corner is commercialized. Thus, the educational institutions must come out from the industrial goals to educational goals.
- An ideal teacher can motivate disinterested students and compensate for what is lacking in the teaching-learning materials
- The teacher must remove the layers of ignorance.
- The purpose of lecturing is not only to convey information but also to clarify the same to a larger group. This requires a great deal of preparation and need to be supported by video, audio or pictures.

To most, it is an affront on the traditional concept that education is a public service and it is the responsibility of all concerned to create and freely disseminate knowledge for sustained national and human development.

The authorities and the people concerned should take valuable and practical steps to improve the quality of education and put an eye into the dropouts, then only, we will stand on our own legs and move with a haughty walk.

*“A good Teacher is one who teaches well.*

*A better teacher is one who motivates the student to learn.*

*The best teacher is one who recommends his students to a better teacher.”*
