ABSTRACT

In this paper, with the use of mathematic techniques, I will understand and analyze the relation between number of matches played by a cricket player and the number of runs scored by him. Using correlation technique, we will understand the relation between number of matches and runs scored for 802 cricketers.

Keywords— Cricket, Correlation, Regression, Runs

1. INTRODUCTION

Cricket is a sport where in two teams of eleven players each engage in a competitive game. The team who scores more runs is declared the winner. A team consists of batsmen, bowlers and a wicketkeeper. The role of a batsman is to score runs, whereas a bowler needs to stop the batsman from scoring runs. Every team bats and fields in a match of cricket. Two umpires on the field are the neutral entities which ensure fair run of play. Over the year the game of sport has evolved and rules have been tweaked, however the basics remain constant. In this paper I have tried to understand the relation between the number of runs a player scores with regards to the number of matches he has played.

3. ANALYSIS

	Mat	Runs
Mat	1	
Runs	0.846142251	1

The number of matches played and runs scored has a positive correlation, this shows as a player plays more matches he tends to score more runs, it means runs scored and number of matches are directly related.

Regression SUMMARY OUTPUT

Regression Stati.	stics
Multiple R	0.846142251
R Square	0.715956709
Adjusted R Square	0.715601211
Standard Error	324.9821813
Observations	801

a=-109.52
b=54.24
Y=a+bX
Y=54.24X-109.52

The above equation states that with every extra one match played the player tends to score 54.24 runs. The above correlation also states that the relation between number of matches and runs scored is directly related. Which means, when a player plays more number of matches he is likely to score more runs.

4. CONCLUSION

From the above analysis it can be concluded that when the player plays more number of matches he is likely to score more runs. This can be credited to the more experience, exposure and better oppositions. This also shows that when a player bats more times he is likely to score more and increase his average score.
