### ABSTRACT

*Objectual understanding of the moments of Sun and Moon in the context of Earth geographical changes influenced by the living and nonliving beings functions followed for better balancing position and the symbological approach. Research-based on the functions followed in ancient and modern times by understanding the moments of the Sun, Moon, and Earth for improving better balance and going through the right directions for obtaining good balancing positions. Explaining the symbological approach for symbolic communication based on the moments of the sun and the moon.*

**Keywords:** *Earth Geographical Moments, Behavioral Thinking, Symbological Approach, Moments of Sun And The Moon.*

### 1. INTRODUCTION

1. Following are the some of the coincidental universal facts consists of unavoidable and avoidable.
  - a. Unavoidable facts consist of moments of sun, moon and earth, which were already in the process for their destination.
  - b. Avoidable features consist of moments of the living beings, actions are based on the availability of the time and sources for a specific period for a specific purpose, if required they are also be re planned for the alternate.
2. In the context of process of moments, time is followed by consequences and consequences are followed by time.
  - a. Time can be described as past, present and future with the moments of sun, moon and earth and consequences are the result of actions.
  - b. Time and consequences are inseparable for instance while taking note about the activities the important aspect is to note the time for specific incident when it had happened or when it will be going to happen.
3. In the context of Sun, Moon and Earth moments, all the living and non living beings are influenced by the moments, behavioral thinking of the living beings should be as per the universal aspects in line with the Sun moments and actions should be based on along with the Moon moments, since living and non living beings on the earth are influenced by the moon moments.

By the light and energy living beings are depended and guided by the sun and moon, sun is the principal star for the solar system and moon is for the earth therefore living and non living beings on the earth are influenced by the moons gravity and moments of the moon are effected on the earth.

**4. Some of the Earth geographical moments occurred due to Moon moments are described as**

Tidal waves, eclipse, seasonal cycles, temperature variances, rains, lighting and gravitational effects, moons appearance on different days.

On the rotating earth objects are balanced by water and controlled by moons gravity.

Some of the pictures are shown below.

**Appearance of the Moon**

**Moments of a boat and the balancing positions in the water.**

**Moment of the objects on the earth.**

**5. Symbological Approach**

**a. Identifying the symbols and their usage in practice.**

b. Symbol ● (dot) represent as planned to do and symbol x (x) represent as planned not to do.

**c. Some of the shapes used in writings along with the Moon moments**

**6. All the living and non living beings take energy from the sun as per the requirement for sustainability. Over consumption of energy leads to negative impact due to radiations.**

All the living and non living beings also take energy from the moon, since it is the nearest star and primarily influenced by the moment of the moon and its directions of moment.

**7. Giving the right input to the brain is the crucial aspect in the process of living. In living beings organizing and functioning is the main aspect of the brain and giving the right input to the brain will give accurate results in actions, will be helpful in maintenance of good health and increasing the life span of the living beings.**

**8. Following are some of the functions carried in line with eco system.**

For example habitual life styles and traditions followed by the people mentioned below.

**a. Ancient Times: Rituals are the traditional formal functions followed in many parts of the world. Their process consists of precautions and procedures particularly for particular occasion represents the directions followed by them and their life styles.**

**b. Modern Times: In modern times Traffic rules and law and order rules are framed in order to maintain the right directions for particular moments and behavior attitudes.**

**9. Following are the right directions by taking into consideration of the moments of the sun and the moon, eco friendly working styles for example.**

**a. Working in the day time without exposed to the sun light for longer time and sleeping in the night time to improving physical and mental health.**

**b. Following proper precautionary procedures for consumption food and utilization of natural resources in a timely manner as per the availability and requirement.**

**c. Protecting the environment by increasing the forest area and for getting more rain fall, to maintain better water levels helpful in improving environmental balance and increase positive attitudes, to avoid negative impact on the living beings.**

**d. Traditional precautionary procedures followed in past are helpful for continuing in the present time and giving right approach to the future generations.**
